BOULDER, COLORADO (January 5, 2010) – QSUM, LLC, a privately held company based in Boulder Colorado, announces the introduction of their new Brachy Bandage™. This Breast Brachytherapy product is specially designed for use with several different product types such as Contura™, Mammosite™, SAVI™, and Axxent™. These devices stay in the breast for 5 days with treatment 2 times a day. A way to stabilize and protect the devices is necessary and patients must be able to carry on their everyday routine. Its unique patent pending features allow the surgeon, radiation oncologist, nurses and patients the ability to provide stabilization, comfort and ease in bandaging beginning at the insertion of the device to the twice daily treatments.

QSUM specializes in biopsy products for Stereotactic, Ultrasound, and MRI including trays and draping systems for Lorad® and Fischer/Siemens® prone biopsy systems. Other accessory products are also available including Ultrasound gels, sterile marking pens and sterile JACHO compliant labels, etc.

Mr. Jones has 17 years of diverse experience with several medical device and disposable companies. His expertise includes the development and management of customer support operations, distribution services, and in-depth experience establishing efficient business systems in support of customer requirements.

Ms Henke-Sarmento RTR (M) (BA) has 25 years experience in the Mammography field. She has 13 years of specialized business experience including Product development, Marketing and Management in specifically Breast imaging and treatment modalities.

QSUM's initial products were introduced in late June 2006. Customer incorporation of the products has been accepted by well known facilities such as MD Anderson, Park Nicollet, Oklahoma Breast Care Center, Cedars-Sinai Medical Center and many more.
